

Servo Motors

AZX Series

Battery-Free Absolute Mechanical Sensor Equipped Motor

Standard Type / PS Geared Type 400 W, 600 W

EtherNet/IP

These servo motors are equipped with a battery-free absolute sensor. They are suitable for positioning applications with a large amount of travel, since they achieve high torque in the high speed range. The basic operations are the same as the **AZ** Series, making combined use in equipment easy.

Battery-Free Absolute Sensor Equipped Servo Motor

The **AZX** Series is equipped with the same battery-free mechanical absolute sensor (ABZO sensor) as the **AZ** Series. These are dedicated servo motors for positioning and continuous operation.

- **Mechanical-Type Sensor**
Holds positioning information even when powered off
- **Multi-Turn Absolute Sensor**
Absolute position detection is possible with ± 900 rotations (1800 rotations) of the motor shaft from the reference home position

● For details about the advantages, please see the Oriental Motor website.

● No External Sensors Required

Thanks to the absolute system, a home sensor or external sensor is not required.

Advantages

- High-Speed Return-to-Home + Improved Return-to-Home Accuracy
- Reduced Cost
- Simple Wiring
- Not Affected by External Sensor Malfunctions

● Battery-Free

No battery is necessary for a mechanical-type sensor. Positioning information is managed mechanically by the ABZO sensor.

Advantages

- No Battery Replacement Required
- No Battery Installation Space Required (Unlimited driver installation possibilities)
- Safe for Overseas Shipping

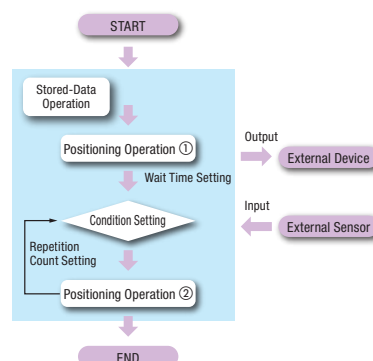

EtherNet/IP-Compatible Driver

This driver is EtherNet/IP-compatible. The host control device and driver can be connected with one EtherNet/IP communication cable, reducing wiring.

Sequence Function Simplifies Programming

AZX Series positioning operations come with a variety of sequence functions, such as a timer setting between operations and linked operation, conditional branching, and loop counting. These can be set using the support software **MEXE02**, which helps simplify the host system's sequence program.

- Positioning Operation Data Setting (Max. 256 points)
- General-Purpose I/O Signal Counts (Input 6, output 6)
- Communication I/O Signal Counts (Input 16, output 16)

Achieves High Torque in the High Speed Range

The **AZX** Series achieves high torque in the high speed range.

It is suitable for positioning applications with a large amount of travel (e.g.: ball screw driving).

Standard Type

PS Geared Type

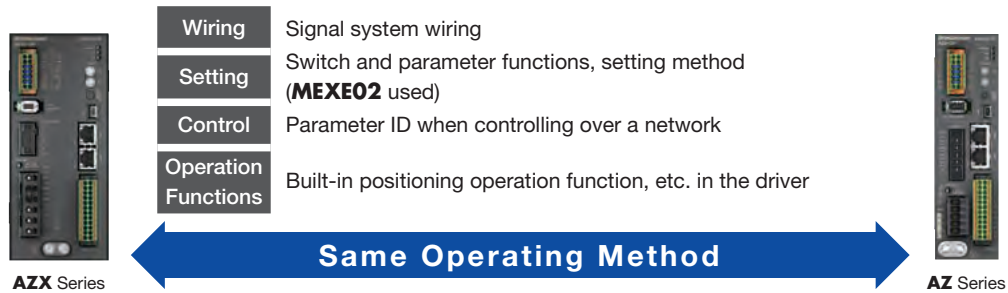

● This is a comparison of the speed – torque characteristics of the **AZX** Series and **AZ** Series.

The **AZX** Series offers superior torque in the high speed range, the **AZ** Series is better in the low speed range.

The Basic Operations are the Same as the AZ Series

Using the **AZX** Series and **AZ** Series together in the same equipment can eliminate the work of operational changes.

Product Line

Motors, drivers, and cables must be ordered individually.

System Configuration

Combination of Standard Type Motor with Electromagnetic Brake and Network Compatible Driver

An example of a configuration using I/O control or EtherNet/IP with an EtherNet/IP compatible driver is shown below. Motors, drivers, and connection cable sets / flexible connection cable sets must be ordered individually.

Example of System Configuration

Motor	+	Driver	+	Cables		+	Peripheral Equipment
AZXM640MC		AZXD-SEP		Connection Cable Set (1 m)	Cable for I/O Signals Connector Type (1 m)		Regeneration Unit
AZXM640MC		AZXD-SEP		CC010VXFB	CC24D010C-1		RGB200
●		●		●	○		○

● The system configuration shown above is an example. Other combinations are also available.

Note

● The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

① Rated Output Power

This is the permissible range the temperature rise may not exceed when continuously operated at the motor's rated speed and rated torque.

② Rated Speed

This is the rotation speed when the motor is operated at rated output power.

③ Max. Speed

This is the maximum rotation speed the motor can turn at.

④ Rated Torque

This is the output torque when the motor is operated at rated output power and rated speed.

⑤ Maximum Instantaneous Torque

This is the maximum torque that can be used instantaneously (in a short period of time).

It is the maximum for acceleration and deceleration, and up to this torque can be used.

⑥ Permissible Speed Range

This is the range of the operable rotation speed on the output gear shaft.

⑦ Rotor Inertia

This refers to the inertia of the rotor inside the motor.

This is necessary when the required torque (acceleration torque) for the motor is calculated.

⑧ Inertia

This is the inertia in the gearhead.

This is necessary when the required torque (acceleration torque) for the motor is calculated.

⑨ Permissible Load Inertia

This is the load inertia that the motor can stably control.

Control can become unstable if a load exceeding this value is applied, resulting in speed regulation variation and issues with protection circuit operation, vibration, etc.

⑩ Gear Ratio

This is the ratio of the rotation speed between the input speed from the motor and the speed of the output gear shaft. For example, a gear ratio of 10 indicates that when the input speed from the motor is 10 r/min, the output gear shaft speed is 1 r/min.

⑪ Resolution

This indicates the angle of rotation of the output shaft in one pulse. For example, if the resolution = 1000 p/rev, one rotation of the motor (360°) can be divided into 1000.

⑫ Backlash

This is the play of the output gear shaft when the motor shaft is fixed.

When positioning in bi-direction, the positioning accuracy is affected.

⑬ Rated Current

This is the input current of the main power supply required for use in the continuous duty region.

⑭ Static Friction Torque

This is the electromagnetic brake specifications. It is the maximum holding torque (holding force) at which the electromagnetic brake can hold position.

How to Read Speed – Torque Characteristics

AZXM640□C

① Continuous Duty Region

This is the region that can be used at continuous rating. The effective load torque must be corrected to this region.

② Limited Duty Region

This is the region used for acceleration and deceleration.

③ Rated Torque

This is the output torque when the motor is operated at rated output power and rated speed.

AZXM940□C-PS5

④ Maximum Instantaneous Torque

This is the maximum torque that can be used instantaneously (in a short period of time).

It is the maximum for acceleration and deceleration, and up to this torque can be used.

*1 Only for products with an electromagnetic brake

*2 Based on Oriental Motor's internal measurement conditions

*3 When a heat sink of a capacity at least equivalent to an aluminum plate with a size of 200×200 mm and 2 mm thickness

*4 T.I.R. (Total Indicator Reading): The total dial gauge reading when the measurement section is rotated once around the reference axis center.

Note

- Separate the motor and driver when measuring insulation resistance or performing a dielectric voltage withstand test. Also, do not perform these tests on the absolute sensor part of the motor.

Permissible Radial Load and Permissible Axial Load

Unit: N

Type	Motor Frame Size	Product Name	Gear Ratio	Permissible Radial Load					Permissible Axial Load
				Distance from Shaft End mm					
				0	5	10	15	20	
Standard Type	60 mm	AZXM640	-	230	245	262	281	304	98
	85 mm	AZXM960	-	376	392	408	426	446	147
PS Geared Type	90 mm	AZXM940	5	380	420	470	540	630	600
			10	480	530	590	680	790	
			25	650	720	810	920	1070	
			5	380	420	470	540	630	600

- The product names are listed such that the product names are distinguishable.
- When the **PS** geared type with an input speed of 3000 r/min operates with either a radial load or axial load, a lifetime of 10000 hours is the permissible value.
For the life of gearhead, please contact the nearest Oriental Motor sales office, or visit the Oriental Motor website.

● Radial Load and Axial Load

Distance from Shaft End [mm]

Rotation Direction

This indicates the rotation direction when viewed from the output shaft side of the motor.

Please check the following table for the rotation direction of the output gear shaft when viewed from the output shaft side of the standard type motor.

Type	Gear Ratio	When Viewed from the Output Shaft Side of the Motor Rotation Direction
PS Geared Type	Total Gear Ratio	Same Direction

EtherNet/IP Compatible	AZXD-SEP	1.5	C260

● Included Items

Control Power Supply Input/Electromagnetic Brake Connection/Regeneration Unit Thermal Input/Power Shut Down Signal I/O Connector (CN1)
 · Connector: DFMC1,5/7-ST-3,5-LR (Phoenix Contact)

Connector for Main Power/Regeneration Unit (CN4)
 · Connector: 1-2271454-6 (TE Connectivity)
 · Connector Wiring Lever

I/O Signals Connector (CN7)
 · Connector: DFMC1,5/12-ST-3,5 (Phoenix Contact)

Connection and Operation

Names of Driver Parts

For details about each function, refer to the operating manual for the **AZX** Series. Either download operating manuals from the Oriental Motor website or contact your nearest Oriental Motor sales office.

◇EtherNet/IP-Compatible

●USB Cable Connection

A USB cable is required for connecting the driver to the computer on which the support software **MEXE02** is installed.

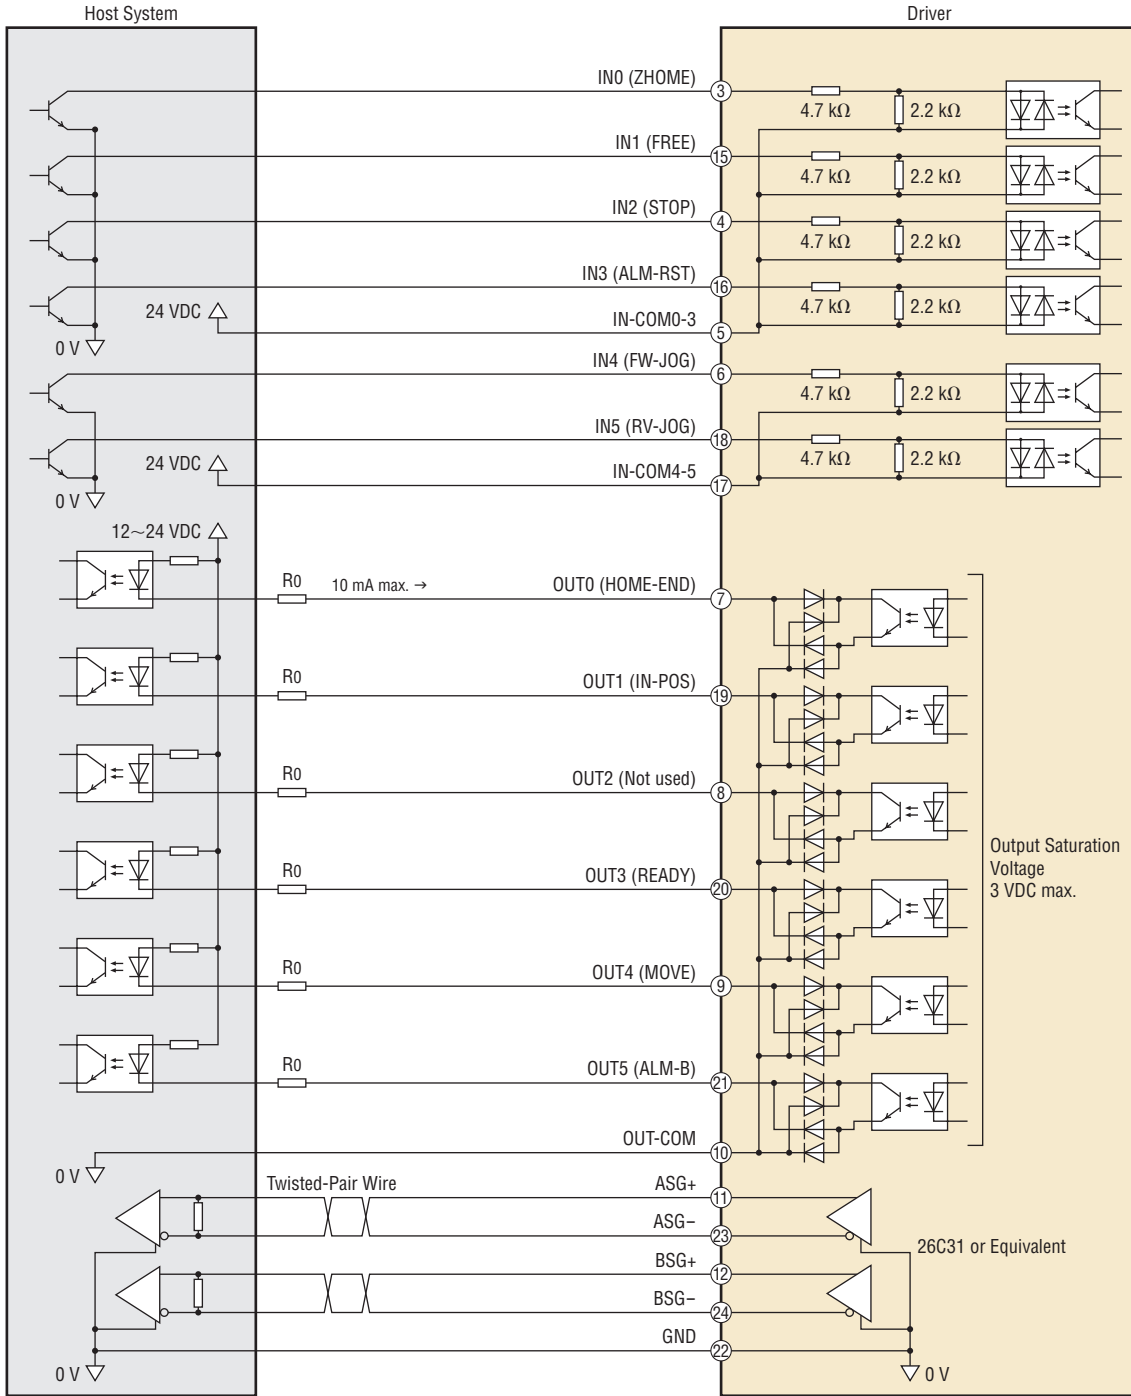

Use a USB cable with the following specifications.

Specifications	USB 2.0 (Full Speed)
Cables	Length: 3 m or less Configuration: A to mini B

● Connection Diagrams

◇ EtherNet/IP-Compatible

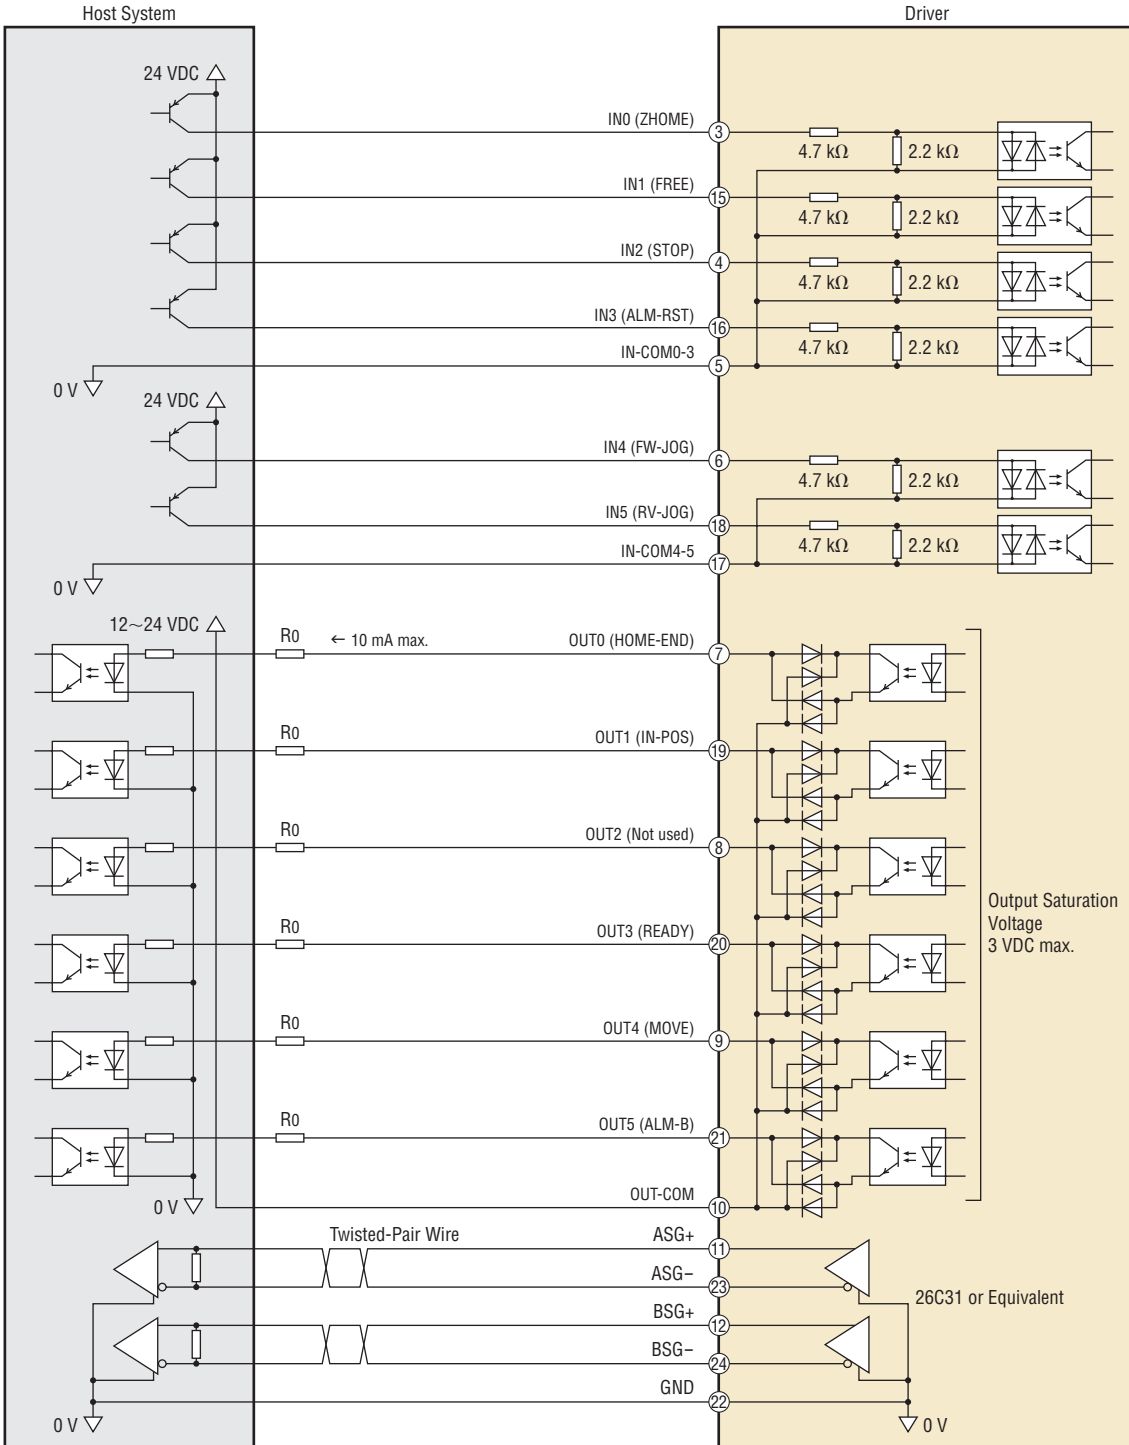

● Diagram for Connection with Current Sink Output Circuit

Note

- Use 24 VDC for the input signals.
- Use output signal at 12~24 VDC 10 mA or less. When the current value exceeds 10 mA, connect an external resistor R0 to reduce the current to 10 mA or less.
- Provide a distance of 200 mm or more between the signal lines and power lines (power supply lines, motor lines).
Do not run the signal lines in the same piping as power lines or bundle them with power lines.
- If noise generated by the motor cable or power supply cable causes a problem with the specific wiring or layout, shield the cable or use ferrite cores.

•Diagram for Connection with Current Source Output Circuit

Note

- Use 24 VDC for the input signals.
- Use output signal at 12~24 VDC 10 mA or less. When the current value exceeds 10 mA, connect an external resistor R0 to reduce the current to 10 mA or less.
- Provide a distance of 200 mm or more between the signal lines and power lines (power supply lines, motor lines). Do not run the signal lines in the same piping as power lines or bundle them with power lines.
- If noise generated by the motor cable or power supply cable causes a problem with the specific wiring or layout, shield the cable or use ferrite cores.

Cable

Cable System Configuration

Network Compatible Driver

*1 Flexible connection cable sets and flexible extension cable sets with excellent durability are also available.

*2 Required for motors with an electromagnetic brake.

*3 Not supplied.

Note

- Up to 3 cables can be used to connect the motor and driver.
- The maximum extension distance between the motor and driver is 20 m.
- The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

Connection Cable

*Required for motors with an electromagnetic brake.

Note

- Up to 3 cables can be used to connect the motor and driver.
- The maximum extension distance between the motor and driver is 20 m.

① Connection Cable Sets / Flexible Connection Cable Sets

This is a connection cable set used to connect the motor and the driver. Use a flexible extension cable set in applications where the cable is bent and flexed repeatedly. The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

Cables for DC Power Supplies

These cables are used to connect the driver and the DC power supply.

Product Line

Product Name	Length L (m)
CC02D005-3	0.5
CC02D010-3	1
CC02D015-3	1.5
CC02D020-3	2
CC02D050-3	5

Dimensions (Unit = mm)

Note on Use of Cables

Note when Connecting Connectors

When inserting or removing connectors, always hold the connector.

Pulling on the cable may result in connection faults.

◇ When Inserting the Connector

Hold the connector body and insert as straight as possible.

If the connector is angled while inserted, it may result in damage to the terminals or connection faults.

◇ When Removing the Connector

Disengage the connector's lock and pull straight out.

If the connector is disengaged by pulling the cable, it may result in damage to the connector.

Notes on Routing of Flexible Cables

Do not bend the cable at the connector. This will apply stress to the connector and the terminal, and may result in connection faults or disconnections.

◇ Cable Fixing Method

Please fix in 2 locations to prevent movement of the connector.

◇ Cable Routing Length and Bend Radius

When routing cables, use an appropriate length that prevents pulling when the cable is moved.

The bend radius must be at least 6 times the cable diameter

◇ Cable Interference

When routing cables inside a cable holder, ensure that the cables do not interfere with each other. This will apply stress to the connector and the terminal, and may result in premature disconnection. Please carefully check the cautions when using cable holders.

◇ Twisting of Cables

Route the cables so that they do not become twisted. Premature wire breaking may occur if they are bent while twisted.

After routing the wires, use the markings on the surface of the cable to ensure that the cables are not twisted.

Peripheral Equipment

Regeneration Unit

The regenerative power generated by the motor may exceed the driver's regenerative power absorption capacity. In such case, a regeneration unit is connected to the driver to dissipate the regenerative power.

<Conditions in Which a Regeneration Unit is Likely Required>

- Vertical drive
- Acceleration or deceleration with an inertial load installed

Prices

Product Name
RGB200

Specifications

Item	Description
Continuous Regenerative Power	200 W
Resistance Value	50 Ω
Thermal Protector Operating Temperature	Operation: 175±5°C Return: 115±15°C (Normally closed)
Thermal Protector Electrical Rating	227 VAC 8 A 115 VAC 22 A

- Install the regeneration unit in a place that has the same heat radiation capability as the heat sink (material: aluminum, 350×350 mm, 3 mm thick).

Motor Mounting Brackets

Mounting brackets convenient for installing motors are available. Pilot holes on the motor are used to allow for snug mounting. Motor installation screws are included.

PLBW5PS

Connector Cover

<Application Example>

This is a resin cover for protecting and securing the connected connector part of the cable.

- Protection level equivalent to IP20
- It can be installed after connecting the motors and drivers.
- It is a structure to secure cables and protect lead wires.
- It can be attached to the equipment using two mounting holes (φ4.5).
